

HELPPBNK STEP 16 - SHIP THE ALPHA: COMPS PIPELINE, SCORING, AND SIMPLE UI

Date: February 21, 2026

OBJECTIVE

Ship a working alpha that takes a scan/query and returns a usable estimate with confidence and flags.

BUILD SCOPE

1. Fetch sold comps from approved data sources.
2. Clean and normalize comp fields.
3. Compute estimate, confidence, and risk flags.
4. Show output in a simple result screen.

REQUIRED USER FLOW

1. User scans or enters text query.
2. System fetches and scores relevant comps.
3. User sees low/median/high estimate + confidence.
4. User can rescan, adjust query, or continue.

IMPLEMENTATION CHECKLIST

1. Comps pipeline connected and returning data.
2. Scoring logic running with confidence output.
3. OCR/text input path working for scan use.
4. Results saved for learning and benchmarking.

COMPLETION CRITERIA

1. End-to-end scan to estimate flow works.
2. Output is clear and actionable for test users.
3. Error/fallback states are handled cleanly.
