

HELPPBNK STEP 5 - PILOT WITH POWER SELLERS AND VALIDATE PRICING/VALUE

Date: February 20, 2026

OBJECTIVE

Run a focused pilot with high-frequency sellers to validate product value, pricing acceptance, and usage economics.

PILOT COHORT

1. Target users: high-frequency eBay sellers (small teams/individuals)
2. Pilot size: 20 users
3. Pilot duration: 14-30 days

WHAT WE ARE TESTING

1. Product usage frequency
2. Conversion intent from Free -> Pro GBP 7 -> Pro+ GBP 12
3. Confidence in estimates during real buying/listing decisions
4. Per-user data cost vs target ARPU

CORE METRICS

1. Activation: % who complete first scan
2. Weekly active pilot users
3. Scan success and timeout rates
4. Plan interest and conversion signals
5. Top reasons to pay / not pay

INTERVIEW + FEEDBACK LOOP

For each pilot user collect:

1. Top job-to-be-done
2. Main pain solved
3. Must-have feature
4. Willingness to pay (GBP 7 / GBP 12 / no)
5. Objections and blockers

REVENUE AND COST FIT CHECK

1. Estimate data cost per active pilot user
2. Compare to expected revenue per user by selected plan
3. Confirm sustainability threshold before scale

DECISION FRAMEWORK (GO / REFINE / PIVOT)

Go: strong usage + clear willingness-to-pay + viable unit economics

Refine: strong usage but pricing/friction issues

Pivot: low usage and weak value signal

OUTPUT / COMPLETION CRITERIA

1. Pilot summary report (usage, conversion intent, top objections)
2. Pricing recommendation (keep GBP 7/12 or adjust)
3. Product decision note: go, refine, or pivot with evidence
